Career Objective

AI & ML student at Anurag Engineering College with skills in Python, Java, JavaScript, HTML, CSS. Interested in building intelligent systems and seeking internship opportunities to apply machine learning and software development skills in real-world projects.

Education

B.Tech 3rd Year –ANURAG ENGINEERING COLLEGE CSE (AI&ML) CGPA: 7.88/10

Intermediate-Govt Junior College,Nelakondapally(Vocational ET) MARKS:781/1000

SSC-Govt High School,Nelakondapally GPA: 8.2

Technical Skills

Programming Languages: Python, Java

Web Technologies: HTML, CSS, JavaScript

Tools: Git, GitHub, VS Code

Core Concepts: Data Structures

Projects

[1]AI-Based Career Path Recommendation System

The AI Based Career Path Recommendation System is a web-based application designed to help students choose suitable career paths based on their skills, interests, and academic branch. Many students face confusion while selecting a career due to lack of proper guidance. This system provides personalized career recommendations using a rule-based matching approach. It analyzes user inputs such as skills, interests, and domain preferences. The system compares this data with a predefined career database across different branches like CSE, ECE, AIML, Pharmacy, and Pharmacology. It generates career suggestions with match percentage, required skills, salary range, and growth opportunities. The system also provides interview questions tailored to each selected career for better preparation. Additionally, it displays sample job opportunities for each career, including company name, role, location, and salary details. A trending careers section highlights in-demand jobs in the industry.

Live Demo: <https://career-path-recomendation-system.onrender.com/>

[2]AI Space Explorer Agent

Developed an AI-based agent that answers space-related queries.

Integrated NASA APIs to fetch daily space images and Mars rover photos.

Provides images, explanations, and space facts based on user input.

Technologies: Python, HTML, CSS, JavaScript, govt space API.

GitHub Repository Link: <https://github.com/tejavathganesh-26/space-explorer-agent>

Live Demo: <https://space-explorer-agent-w8pu.onrender.com/>

[3]Trinity

TRINITY is a bilingual (Telugu/English) rural intelligence web platform built for Telangana farmers.it has 3 modules namely krishi(Agri), Arogya(Health), Schemes.It features AI-powered crop disease detection using Claude Vision API,crop advice,sowing calendar, profit predictor, symptoms checker,mother and child-pregnancy tracker, child nutrition,vaccines,ICDS schemes,Medicine reminder,government scheme discovery, and a farmer dashboard — all in a single friendly web application.

Technologies: HTML,CSS,JavaScript,API's.

GitHub Repository Link: <https://github.com/tejavathganesh-26/TRINITY>

Live Demo: <https://trinity-ganesh-2604.netlify.app/>

[4]Medical Report Analysis

Medical reports often contain complex medical terms and numerical values that are difficult for patients to understand. MedSense AI solve this problem by automatically analyzing medical reports and providing simple explanations. The system extracts text from reports using OCR and processes the data using Flask to help users easily understand their health information.

Technologies: HTML,CSS,JavaScript,OCR.

GitHub Repository Link: <https://github.com/tejavathganes-26/medical-report-analyzer>

[5]Personal portfolio

Developed my personal portfolio website to showcase my skills, projects, and achievements. Built a responsive and visually appealing interface using HTML, CSS, JavaScript, and Tailwind CSS. Integrated project demo links and contact features, and deployed the website on Netlify.

Technologies: HTML,CSS,JavaScript.

[6]Calculator Web Application

Developed a responsive calculator web application using HTML, CSS, and JavaScript with support for basic arithmetic operations. Implemented an interactive user interface with a display screen, functional buttons, clear/reset option, real-time calculations, and keyboard input support to enhance user experience.

Technologies: HTML,CSS,JavaScript.

GitHub Repository Link: https://github.com/tejavathganes-26/HorizonTechX_calculator

Live Demo: https://tejavathganes-26.github.io/HorizonTechX_calculator/

[7]JavaScript Music Player

Built an interactive music player application using HTML, CSS, and JavaScript featuring audio playback controls such as play, pause, next, and previous. Added song information display, progress tracking, duration display, volume controls, and a responsive user-friendly interface.

Technologies: HTML,CSS,JavaScript.

GitHub Repository Link: https://github.com/tejavathganes-26/HorizonTechX_Music-player

Live Demo: https://tejavathganes-26.github.io/HorizonTechX_Music-player/

Strengths

Quick learner

Time Management

Teamwork

Interest in AI & ML technologies
